# POWERSHELL BASIC SCRIPTING

## MODULE 9: FUNCTIONS AND MODULES

Jan Marek | Cyber Rangers

CEH | CHFI | CompTIA Pentest+ | CEI | MVP | MCT | MCC | MCSA | MCSE

Ethical Hacker, Forensic Investigator & Security Engineer

[jan@cyber-rangers.com](mailto:jan@cyber-rangers.com) | [www.cyber-rangers.com](http://www.cyber-rangers.com)

# AGENDA

- What is function and to create one
- Function structure best practices
- How to create PowerShell script module

# FUNCTIONS

- Can be used as subroutines

```
function Hello-Hackers {  
    param(  
        [int]$Count = 1  
    )  
    1..$Count | ForEach-Object {  
        Write-Host 'Hello Hackers!!!'  
    }  
}
```

Hello-Hackers

# SCRIPT MODULE

- psm1 extension
- Create file and folder with same name
- Used to define functions, aliases, psdrives, etc.

# LAB

# POWERSHELL BASIC SCRIPTING
